EXERCISE-16

PROCEDURES AND FUNCTIONS

PROCEDURES

DEFINITION

A procedure or function is a logically grouped set of SQL and PL/SQL statements that perform a specific task. They are essentially sub-programs. Procedures and functions are made up of,

- Declarative part
- Executable part
- Optional exception handling part

These procedures and functions do not show the errors.

KEYWORDS AND THEIR PURPOSES

REPLACE: It recreates the procedure if it already exists.

PROCEDURE: It is the name of the procedure to be created.

ARGUMENT: It is the name of the argument to the procedure. Paranthesis can be omitted if no arguments are present.

IN: Specifies that a value for the argument must be specified when calling the procedure ie. used to pass values to a sub-program. This is the default parameter.

OUT: Specifies that the procedure passes a value for this argument back to it's calling environment after execution ie. used to return values to a caller of the sub-program.

INOUT: Specifies that a value for the argument must be specified when calling the procedure and that procedure passes a value for this argument back to it's calling environment after execution.

RETURN: It is the datatype of the function's return value because every function must return a value, this clause is required.

PROCEDURES – SYNTAX

```
create or replace procedure <procedure name> (argument {in,out,inout} datatype ) {is,as}
variable declaration;
constant declaration;
begin
PL/SQL subprogram body;
exception
exception PL/SQL block;
end;
```

FUNCTIONS – SYNTAX

```
create or replace function <function name> (argument in datatype,……) return datatype {is,as}
variable declaration;
```

constant declaration;
begin
PL/SQL subprogram body;
exception
exception PL/SQL block;
end;

CREATING THE TABLE 'ITITEMS' AND DISPLAYING THE CONTENTS

```
SQL> create table ititems(itemid number(3), actualprice number(5), ordid number(4), prodid
number(4));
Table created

SQL> insert into ititems values(101, 2000, 500, 201);
1 row created.

SQL> insert into ititems values(102, 3000, 1600, 202);
1 row created.

SQL> insert into ititems values(103, 4000, 600, 202);
1 row created.

SQL> select * from ititems;
ITEMID ACTUALPRICE    ORDID   PRODID
--------- ----------- -------- ---------
   101       2000        500     201
   102       3000       1600     202
   103       4000        600     202
```

PROGRAM FOR GENERAL PROCEDURE – SELECTED RECORD'S PRICE IS INCREMENTED BY 500 , EXECUTING THE PROCEDURE CREATED AND DISPLAYING THE UPDATED TABLE

```
SQL> create procedure itsum(identity number, total number) is price number;
  2  null_price exception;
  3  begin
  4  select actualprice into price from ititems where itemid=identity;
  5  if price is null then
  6  raise null_price;
  7  else
  8  update ititems set actualprice=actualprice+total where itemid=identity;
  9  end if;
 10  exception
 11  when null_price then
 12  dbms_output.put_line('price is null');
 13  end;
 14  /
Procedure created.

SQL> exec itsum(101, 500);
PL/SQL procedure successfully completed.

SQL> select * from ititems;
ITEMID   ACTUALPRICE     ORDID     PRODID
```

101	2500	500	201
102	3000	1600	202
103	4000	600	202

PROCEDURE FOR 'IN' PARAMETER – CREATION, EXECUTION

```
SQL> set serveroutput on;

SQL> create procedure yyy (a IN number) is price number;
  2  begin
  3  select actualprice into price from ititems where itemid=a;
  4  dbms_output.put_line('Actual price is ' || price);
  5  if price is null then
  6  dbms_output.put_line('price is null');
  7  end if;
  8  end;
  9  /
Procedure created.

SQL> exec yyy(103);
Actual price is 4000
PL/SQL procedure successfully completed.
```

PROCEDURE FOR 'OUT' PARAMETER – CREATION, EXECUTION

```
SQL> set serveroutput on;

SQL> create procedure zzz (a in number, b out number) is identity number;
  2  begin
  3  select ordid into identity from ititems where itemid=a;
  4  if identity<1000 then
  5   b:=100;
  6  end if;
  7  end;
  8  /
Procedure created.

SQL> declare
  2  a number;
  3  b number;
  4  begin
  5  zzz(101,b);
  6  dbms_output.put_line('The value of b is '|| b);
  7  end;
  8  /
The value of b is 100
PL/SQL procedure successfully completed.
```

PROCEDURE FOR 'INOUT' PARAMETER – CREATION, EXECUTION

```
SQL> create procedure itit ( a in out number) is
  2  begin
  3  a:=a+1;
```

```
 4  end;
 5  /
Procedure created

SQL> declare
 2  a number:=7;
 3  begin
 4  itit(a);
 5  dbms_output.put_line('The updated value is '||a);
 6  end;
 7  /
The updated value is 8
PL/SQL procedure successfully completed.
```

CREATE THE TABLE 'ITTRAIN' TO BE USED FOR FUNCTIONS

```
SQL>create table ittrain ( tno number(10), tfare number(10));
Table created.

SQL>insert into ittrain values (1001, 550);
1 row created.

SQL>insert into ittrain values (1002, 600);
1 row created.

SQL>select * from ittrain;
    TNO      TFARE
---------  ----------
   1001        550
   1002        600
```

PROGRAM FOR FUNCTION AND IT'S EXECUTION

```
SQL> create function aaa (trainnumber number) return number is
 2  trainfunction ittrain.tfare % type;
 3  begin
 4  select tfare into trainfunction from ittrain where tno=trainnumber;
 5  return(trainfunction);
 6  end;
 7  /

Function created.

SQL> set serveroutput on;

SQL> declare
 2  total number;
 3  begin
 4  total:=aaa (1001);
 5  dbms_output.put_line('Train fare is Rs. '||total);
 6  end;
 7  /
Train fare is Rs.550
PL/SQL procedure successfully completed.
```

Program 1

FACTORIAL OF A NUMBER USING FUNCTION

```
SET SERVEROUTPUT ON;
CREATE OR REPLACE FUNCTION factorial (n NUMBER)
RETURN NUMBER
IS
 fact NUMBER := 1;
BEGIN
  FOR i IN 1..n LOOP
  fact := fact * i;
  END LOOP;
 RETURN fact;
END;
/
DECLARE
  num NUMBER := 5;
 result NUMBER;
BEGIN
  result := factorial (num);
DBMS_OUTPUT.PUT_LINE ('factorial of' ||num|| 'is' ||
                                        result);
END;
/
```

Program 2

Write a PL/SQL program using Procedures IN,INOUT,OUT parameters to retrieve the corresponding book information in library

```
SET SERVEROUTPUT ON;
CREATE OR REPLACE PROCEDURE get_book_info
   (P_book_id IN NUMBER, P_book_name OUT
VARCHAR2, P_author OUT VARCHAR, P_price IN OUT
                                   NUMBER) IS
BEGIN
   SELECT book_name, author, price INTO P_book_name,
P_author, P_price FROM Libary WHERE book_id = P_book_id;
DBMS_OUTPUT.PUT_LINE ('Book Name:' ||P_book_name);
DBMS_OUTPUT.PUT_LINE ('Author :' || P_author);
DBMS_OUTPUT.PUT_LINE ('Price :' || P_Price);
EXCEPTION
   WHEN NO_DATA_FOUND THEN
V_book_name VARCHAR2(50);
V_author VARCHAR2(50);
   V_price NUMBER := 0;
```

Evaluation Procedure	Marks awarded
PL/SQL Procedure(5)	5
Program/Execution (5)	5
Viva(5)	5
Total (15)	15
Faculty Signature	

```
BEGIN
get_book_info (101, V_book_name, V_author, V_price);
DBMS_OUTPUT.PUT_LINE ('Book info Retrieved
                    Successfully.');
END;
```
