

3/10/25

## EXERCISE-15

### Controlling User Access

#### Objectives

After the completion of this exercise, the students will be able to do the following:

- Create users
- Create roles to ease setup and maintenance of the security model
- Use the GRANT and REVOKE statements to grant and revoke object privileges
- Create and access database links

### **Controlling User Access**

#### Controlling User Access

In a multiple-user environment, you want to maintain security of the database access and use. With Oracle server database security, you can do the following:

- Control database access
- Give access to specific objects in the database
- Confirm given and received *privileges* with the Oracle data dictionary
- Create synonyms for database objects

#### Privileges

- Database security:
  - System security
  - Data security
- System privileges: Gaining access to the database
- Object privileges: Manipulating the content of the database objects
- Schemas: Collections of objects, such as tables, views, and sequences

#### System Privileges

- More than 100 privileges are available.
- The database administrator has high-level system privileges for tasks such as:
  - Creating new users

Removing users  
 Removing tables  
 Backing up tables  
 Typical DBA Privileges

System Privilege	Operations Authorized
CREATE USER	Grantee can create other Oracle users (a privilege required for a DBA role)
DROP USER	Grantee can drop another user
DROP ANY TABLE	Grantee can drop a table in any schema
BACKUP ANY TABLE	Grantee can back up any table in any schema with the export utility
SELECT ANY TABLE	Grantee can query tables, views, or snapshots in any schema
CREATE ANY TABLE	Grantee can create tables in any schema

### Creating Users

The DBA creates users by using the CREATE USER statement.

#### EXAMPLE:

```
CREATE USER scott IDENTIFIED BY tiger;
```

### User System Privileges

- Once a user is created, the DBA can grant specific system privileges to a user.
- An application developer, for example, may have the following system privileges:

- CREATE SESSION
- CREATE TABLE
- CREATE SEQUENCE
- CREATE VIEW
- CREATE PROCEDURE

GRANT *privilege* [, *privilege*...]

TO user [, user| role, PUBLIC...];

### Typical User Privileges

System Privilege	Operations Authorized
CREATE SESSION	Connect to the database
CREATE TABLE	Create tables in the user's schema
CREATE SEQUENCE	Create a sequence in the user's schema
CREATE VIEW	Create a view in the user's schema
CREATE PROCEDURE	Create a stored procedure, function, or package in the user's schema

### In the syntax:

*privilege* is the system privilege to be granted

*user* |role|PUBLIC is the name of the user, the name of the role, or PUBLIC designates that every user is granted the privilege

**Note:** Current system privileges can be found in the dictionary view SESSION\_PRIVS.

### Granting System Privileges

The DBA can grant a user specific system privileges.

GRANT create session, create table, create sequence, create view TO scott;

### What is a Role?

A role is a named group of related privileges that can be granted to the user. This method makes it easier to revoke and maintain privileges.

A user can have access to several roles, and several users can be assigned the same role. Roles are typically created for a database application.

### Creating and Assigning a Role

First, the DBA must create the role. Then the DBA can assign privileges to the role and users to the role.

#### Syntax

CREATE ROLE *role*;

In the syntax:

*role* is the name of the role to be created

Now that the role is created, the DBA can use the GRANT statement to assign users to the role as well as assign privileges to the role.

### Creating and Granting Privileges to a Role

CREATE ROLE manager;  
Role created.

GRANT create table, create view TO manager;  
Grant succeeded.

GRANT manager TO DEHAAN, KOCHHAR;  
Grant succeeded.

- Create a role
- Grant privileges to a role
- Grant a role to users

### Changing Your Password

- The DBA creates your user account and initializes your password.
- You can change your password by using the

ALTER USER statement.  
ALTER USER scott  
IDENTIFIED BY lion;  
User altered.

## Object Privileges

Object Privilege	Table	View	Sequence	Procedure
ALTER	√		√	
DELETE	√	√		
EXECUTE				√
INDEX	√			
INSERT	√	√		
REFERENCES	√	√		
SELECT	√	√	√	
UPDATE	√	√		

### Object Privileges

- Object privileges vary from object to object.
- An owner has all the privileges on the object.
- An owner can give specific privileges on that owner's object.  
GRANT *object\_priv* [(*columns*)]  
ON *object*  
TO {*user*|*role*|PUBLIC}  
[WITH GRANT OPTION];

#### **In the syntax:**

*object\_priv* is an object privilege to be granted

ALL specifies all object privileges

*columns* specifies the column from a table or view on which privileges are granted

ON *object* is the object on which the privileges are granted

TO identifies to whom the privilege is granted

PUBLIC grants object privileges to all users

WITH GRANT OPTION allows the grantee to grant the object privileges to other users and roles

### Granting Object Privileges

- Grant query privileges on the EMPLOYEES table.
- Grant privileges to update specific columns to users and roles.

GRANT select  
ON employees  
TO sue, rich;

```
GRANT update (department_name, location_id)
ON departments
TO scott, manager;
```

### **Using the WITH GRANT OPTION and PUBLIC Keywords**

- Give a user authority to pass along privileges.
- Allow all users on the system to query data from Alice's DEPARTMENTS table.

```
GRANT select, insert
ON departments
TO scott
WITH GRANT OPTION;
```

```
GRANT select
ON alice.departments
TO PUBLIC;
```

### **How to Revoke Object Privileges**

- You use the REVOKE statement to revoke privileges granted to other users.
- Privileges granted to others through the WITH GRANT OPTION clause are also revoked.

```
REVOKE {privilege [, privilege...]} ALL
ON object
FROM {user[, user...]} role PUBLIC
[CASCADE CONSTRAINTS];
```

#### **In the syntax:**

CASCADE is required to remove any referential integrity constraints made to the CONSTRAINTS object by means of the REFERENCES privilege.

### **Revoking Object Privileges**

As user Alice, revoke the SELECT and INSERT privileges given to user Scott on the DEPARTMENTS table.

```
REVOKE select, insert
ON departments
FROM scott;
```

Find the Solution for the following:

1. What privilege should a user be given to log on to the Oracle Server? Is this a system or an object privilege?

CREATE SESSION;

2. What privilege should a user be given to create tables?

CREATE TABLE;

3. If you create a table, who can pass along privileges to other users on your table?

option;

GRANT SELECT ON emp TO user, with grant

4. You are the DBA. You are creating many users who require the same system privileges. What should you use to make your job easier?

CREATE role manager role;

GRANT CREATE TABLE CREATE VIEW TO manager role;

5. What command do you use to change your password?

ALTER USER username identified by new password;

6. Grant another user access to your DEPARTMENTS table. Have the user grant you query access to his or her DEPARTMENTS table.

GRANT SELECT ON department

7. Query all the rows in your DEPARTMENTS table.

SELECT \* FROM department

8. Add a new row to your DEPARTMENTS table. Team 1 should add Education as department number 500. Team 2 should add Human Resources department number 510. Query the other team's table.

INSERT : into department values (500, 'Education');

9. Query the USER\_TABLES data dictionary to see information about the tables that you own.

SELECT table\_name FROM user\_tables;

10. Revoke the SELECT privilege on your table from the other team.

Revoke select on departments from user;

11. Remove the row you inserted into the DEPARTMENTS table in step 8 and save the changes.

DELETE FROM department WHERE department\_id IN (500, 510);

<u>Evaluation Procedure</u>	<u>Marks awarded</u>
<u>Practice Evaluation (5)</u>	5
<u>Viva(5)</u>	5
<u>Total (10)</u>	10
<u>Faculty Signature</u>	<i>P. M.</i>

# PROGRAM 1

Write a PL/SQL block to calculate the incentive of an employee whose ID is 110.

DECLARE

V\_emp\_id employees.employee\_id %TYPE := 110;  
V\_salary employees.salary %TYPE;  
V\_incentive NUMBER;

BEGIN

SELECT salary INTO v\_salary  
FROM employees  
WHERE employee\_id = V\_emp\_id;

V\_incentive := V\_salary \* 0.10;

EXCEPTION:

WHEN NO-DATA FOUND THEN

DBMS\_OUTPUT.PUT\_LINE('Employee not found!');

WHEN OTHER THEN

DBMS\_OUTPUT.PUT\_LINE('Error!! SQLERRM

END;

/

## PROGRAM 2

Write a PL/SQL block to show an invalid case-insensitive reference to a quoted and without quoted user-defined identifier.

```
DECLARE
```

```
  "MY var" NUMBER := 100;
```

```
BEGIN
```

```
  DBMS_OUTPUT.PUT_LINE ('MyVar');
```

```
  DBMS_OUTPUT.PUT_LINE ('MY var');
```

```
END;
```

```
/
```

### PROGRAM 3

Write a PL/SQL block to adjust the salary of the employee whose ID 122.

Sample table: employees

```
DECLARE
    v_emp_id employees.employee_id%TYPE := 122;
BEGIN
    UPDATE employees
    SET salary = salary + (salary * 0.10)
    WHERE employee_id = v_emp_id;
    DBMS_OUTPUT.PUT_LINE ('Salary updated successfully
    for employee ID: ' || v_emp_id);
    EXCEPTION
    WHEN NO_DATA_FOUND THEN
        DBMS_OUTPUT.PUT_LINE ('Employee not found');
    WHEN OTHER THEN
        DBMS_OUTPUT.PUT_LINE ('ERROR: ' || SQLERRM);
END
```

#### PROGRAM 4

Write a PL/SQL block to create a procedure using the "IS [NOT] NULL Operator" and show AND operator returns TRUE if and only if both operands are TRUE.

```
CREATE OR REPLACE PROCEDURE check_nulls IS
```

```
    a Number := 10;
```

```
    b Number := NULL;
```

```
BEGIN
```

```
    IF a IS NOT NULL AND b IS NOT NULL THEN  
        DBMS_OUTPUT.PUT_LINE ('Both values are NOT NULL');  
    ELSE
```

```
        DBMS_OUTPUT.PUT_LINE ('At least one value is NULL');  
    END IF;
```

```
END;
```

```
/
```

```
BEGIN:
```

```
    check_nulls;
```

```
END;
```

# PROGRAM 5

Write a PL/SQL block to describe the usage of LIKE operator including wildcard characters and escape character.

```
DECLARE
```

```
V_name VARCHAR2(20) := 'RAJESH';
```

```
BEGIN
```

```
IF V_name LIKE 'RA%' THEN
```

```
DBMS_OUTPUT.PUT_LINE('Name starts  
with RA');
```

```
END IF;
```

```
IF V_name LIKE 'R.JESH' THEN
```

```
DBMS_OUTPUT.PUT_LINE('Second character is any  
single letter');
```

```
END IF;
```

```
END;
```

# PROGRAM 6

Write a PL/SQL program to arrange the number of two variable in such a way that the small number will store in num\_small variable and large number will store in num\_large variable.

DECLARE

a NUMBER := 50;

b NUMBER := 30;

num\_small NUMBER;

num\_large NUMBER;

BEGIN

IF a < b THEN

num\_small := a;

num\_large := b;

ELSE

num\_small := b;

num\_large := a;

END IF;

DBMS\_OUTPUT.PUT\_LINE ('Small Number: ' || num\_small);

END;

## PROGRAM 7

Write a PL/SQL procedure to calculate the incentive on a target achieved and display the message either the record updated or not.

```
BEGIN
```

```
    UPDATE employees.
```

```
        SET Salary = Salary + (Salary * 0.05)
```

```
    WHERE employee_id = 110 AND Sales >= target  
    IF SQL%ROWCOUNT > 0 THEN
```

```
        DBMS_OUTPUT.PUT_LINE('Incentive  
                                added : "');
```

```
    ELSE
```

```
        DBMS_OUTPUT.PUT_LINE('Record not updated.');
```

```
END IF;
```

```
END;
```

```
/
```

## PROGRAM 8

Write a PL/SQL procedure to calculate incentive achieved according to the specific sale limit.

```
CREATE OR REPLACE PROCEDURE calc_incentive
```

```
Sales NUMBER := 80000;
```

```
Incentive NUMBER;
```

```
BEGIN
```

```
IF Sales >= 10000 THEN
```

```
    incentive := Sales * 0.10;
```

```
ELSEIF Sales >= 50000 THEN
```

```
    incentive := Sales * 0.05
```

```
ELSE
```

```
    incentive := 0;
```

```
END IF;
```

```
END;
```

```
BEGIN
```

```
    calc_incentive;
```

```
END;
```

### PROGRAM 9

Write a PL/SQL program to count number of employees in department 50 and check whether this department have any vacancies or not. There are 45 vacancies in this department.

DECLARE

v-count NUMBER;

v-vacancies NUMBER := 45;

BEGIN

SELECT COUNT (\*) INTO v-count  
FROM employees  
WHERE department\_id = 50;

IF v-count < v-vacancies THEN

DBMS\_OUTPUT.PUT\_LINE('No vacancies in  
department 50');

END;

# PROGRAM 10

Write a PL/SQL program to count number of employees in a specific department and check whether this department have any vacancies or not. If any vacancies, how many vacancies are in that department.

```
DECLARE
```

```
    v_dept_id NUMBER := 60;
```

```
    v_total_positions NUMBER := 50;
```

```
    v_emp_count NUMBER;
```

```
BEGIN
```

```
    SELECT COUNT (*) INTO v_emp_count
```

```
    FROM employee
```

```
    WHERE department_id = v_dept_id;
```

```
ELSE
```

```
    DBMS_OUTPUT.PUTLINE ('NO vacancies in Department
```

```
    " v_dept_id);
```

```
END IF;
```

```
END;
```

# PROGRAM 11

Write a PL/SQL program to display the employee IDs, names, job titles, hire dates, and salaries of all employees.

DECLARE

CURSOR emp-cursor IS

SELECT employee-id, first-name, job-id,

FROM employee;

V-emp emp-cursor ROWTYPE;

BEGIN

OPEN emp-cursor;

LOOP

NAME: '' || V-emp.first-name ||

'Job'; '' || V-emp.job-id ||

END LOOP;

CLOSE emp-cursor;

END;

## PROGRAM 12

Write a PL/SQL program to display the employee IDs, names, and department names of all employees.

DECLARE

CURSOR emp-cursor

SELECT e.employee\_id, e.first\_name,

FROM employees e

JOIN department d

V-rec emp-cursor%ROWTYPE;

BEGIN

OPEN emp-cursor;

LOOP

FETCH emp-cursor INTO V-rec;

EXIT WHEN emp-cursor%NOTFOUND;

END LOOP;

CLOSE emp-cursor;

END;

/

### PROGRAM 13

Write a PL/SQL program to display the job IDs, titles, and minimum salaries of all jobs.

```
DECLARE
    CURSOR job-cus IS
        SELECT job-id, job-title, min-salary
        FROM jobs;
    v-job job-cus%ROWTYPE;
BEGIN
    OPEN job-cus;
    LOOP
        FETCH job-cus INTO v-job;

    END LOOP;
    CLOSE job-cus;
```

#### PROGRAM 14

Write a PL/SQL program to display the employee IDs, names, and job history start dates of all employees.

DECLARE

```
CURSOR emp_Cur IS
SELECT e.employee_id, e.first_name, j2.start
FROM employee
JOIN job_history jh
ON e.employee_id = jh.employee_id;
v_rec emp_Cur%ROWTYPE;
```

BEGIN

OPEN emp.

LOOP

FETCH emp-CUR INTO v-rec;

EX WHEN emp-CUR%NOT FOUND;

END LOOP;

CLOSE emp-cur;

END;

/

# PROGRAM 15

Write a PL/SQL program to display the employee IDs, names, and job history end dates of all employees.

```

BEGIN
  FOR rec IN
    SELECT e.employee_id, e.first_name, h.end_date
  FROM employee e JOIN job_history
    ON e.employee_id = h.employee_id
  LOOP
    'name' || rec.first_name ||
    'end date' || rec.end_date);
  END LOOP;
);

```
